

INTERFACES AND SCENARIO DATA

CLI

Python API

Flask API

Schema + prototype, weather
and baseline database

STOR4BUILD WORKFLOW ASSEMBLY

Technology model

IceTank or DxCoil

Simulation

orders model, EnergyPlus and reporting steps

OpenStudio Workflow (s4b.osw)

seed model + weather + measures + arguments

OPENSTUDIO AND ENERGYPLUS

OpenStudio CLI

applies measures
and translates the model

EnergyPlus

building, HVAC and plant solver
controls timesteps and iteration

TES integration

Thermal tank: PythonPlugin + user-defined plant component

Packaged ice: native thermal-storage DX coil

Optional control plugins actuate the tank mode schedule

RESULTS AND COMPARISON

EnergyPlus CSV + reports

repair, select frequency and align cases

combined baseline + TES output
